

Systematic Services

New standards for solar operations

Systematic Services by Mounting Systems

We believe customer support starts long before installation and continues far beyond.

From the initial planning phase to logistics and individual construction: We are your partner all the way. We provide first-class support during the preparation of your project and during its implementation. Once up and running, we're sure there will be little need for us, but if there is, we will be there for you.

From project developers to investors, from planning engineers to construction managers, from operators to financiers: Our PV racking systems combined with our services offer immediate advantages and long-term planning security for everyone involved.

**Comprehensive, methodical, dependable:
That's Systematic Services.**

Our Services

Construction planning

Which modules do you need in which orientation? We provide you with detailed engineering, including all static calculations (including corrosion, wind and snow load analysis). We measure, secure and test the stability of your entire system.

Implementation planning

You will receive a detailed implementation plan defining all technical parameters such as distances and tolerances. Moreover, we will provide you with recommendations for the type and dimensions of the foundations (concrete, screw, floating foundation or piles) as well as for operation and maintenance.

Construction

We will take your individual requests and all project-related factors associated with the local environment into account. This includes weather conditions such as prevailing winds and snowfall probability, and ground conditions such as terrain type and soil composition.

Logistics

We guarantee express delivery directly from the manufacturer, provide delivery and repackaging services at the port, and take care of all your legal documents.

Installation

On site we build your foundations (piles, concrete, gabions or pontoons) and assemble the entire system, including the installation of the solar modules and string inverters.

Monitoring

A project manager will be assigned as a permanent, personal contact, and under their direction, a construction site manager will take care of your entire logistics on site. Additionally, we offer installation training and can coach your technical staff, and define project-based control parameters for construction supervision. The inspection and commissioning of our products complements and completes this crucial package of services.

Operation and maintenance

Not just nuts and bolts, but peace of mind. Mounting Systems offers tailor-made service contracts with all the maintenance you need, including long-term availability guarantees. And if needed, we can also issue expert reports (TÜV CERT) and warranty extensions perfectly suited to your requirements.

All technical data sheets and planning documents are available for download from our website. We are always available for any individual, current or future questions, and for on-site support.

Get in touch, we're listening.
